

**Legend:**

- + Added feature
  - \* Improved/changed feature
  - Bug fixed
  - ! Known issue / missing feature
- 

**Version 9.4.2 - August 9th, 2022****Kerio Connect**

- + Multi-server feature
  - "Too many simultaneous connections" error
  - Kerio connect crashes once "specific" email is opened in WebMail
  - MS Outlook for MAC using EWS randomly "forgets" application password (with 2FA is enabled to the account)
  - Backup module reporting 0 bytes free when the disk space partition has available space.
  - KOFF - Attachments in meeting invitations are not working (support all meeting attachments except text files or csvs)
  - Shared Folders with non-ASCII Characters Sync over ActiveSync Regardless of Preference
  - [WEBMAIL CONTACTS] If a contact is created with only a "Company" field, making a modification to the Notes and saving corrupts the contact. (Regression)
  - .ICS RSVP status is not processed when an external attendee accepts a meeting
  - Cannot search for contacts using the Notes and Phone number property in webmail (search by phone number)
  - Events Created in Jerusalem Time Zone with "All Day" set are not compatible with O365 / Exchange Accounts
  - Fix time zone for Brasilia
- 

**Version 9.4.1p1 - July 4th, 2022****Version 9.3.1p3 - July 4th, 2022****Kerio Connect 9.4.1p1**

- HTML formatted emails are displayed as plain text when using KOFF
- "The RPC server is unavailable" error when receiving certain types of attachments over KOFF

**Kerio Connect 9.3.1p3**

- HTML formatted emails are displayed as plain text when using KOFF
  - A problem has occurred in the 'XMPP Server' component error
- 

**Version 9.4.1 - March 16th, 2022****Kerio Connect**

- + Security Vulnerability - Upgrade to Log4j 2.17.1
  - 3CX meeting invitations are causing Kerio Connect to crash
  - Unable to delete emails from public folders with version 9.4
  - Shared folders with non-ASCII characters sync over ActiveSync regardless of preference
  - Cannot search contact by phone numbers in webmail
  - ActiveSync - Timezones are updated incorrectly when events are updated
  - Filename has escaped characters when using Download All attachments in Kerio Connect Client
  - Added support for Content-Security-Policy-Report-Only HTTP Header
- 

**Version 9.4.0 - January 13th, 2022****Kerio Connect**

- + Two-factor authentication
  - + Added application passwords for KOFF, IMAP and similar
  - + Added TLS options in GUI
  - + Integration with Let's Encrypt with auto-renewal functionality
  - Broken Google Play icon shows in "sync app" options when integration with web mail
  - KOFF not syncing emails over 1000 items on O365 version of Outlook
  - MS Teams URL not showing in received emails
  - Unable to set the timezone in the web mail client
  - ActiveSync is returning search results in wrong order
  - Implementation of Log4j 2.17.0
  - Server OS information and Kerio Connect engine details are exposed
  - Changes to "full name" property are not reflected in contacts
  - Paper clip icon is showing incorrectly and is disappearing in KOFF & WebMail
  - Unable to forward contact "as Outlook contact" using EAS protocol with Outlook
  - Zoom meeting invites are not syncing with iOS calendar
  - KOFF authentication fails when reverse proxy changes WWW-authenticate header to lowercase
- 

**Distributor Schweiz**

- Email forwarded back and forth between two mailboxes are lost
  - Delegated email addresses are removed from the "To" and "Cc" field when replying to an email
  - Shared calendar names are not displayed correctly in the Apple calendar app in BigSur when using CalDav
  - ActiveSync implementation allows to send duplicate messages
  - Selecting "about" while logged in as the built-in admin results into "internal error"
  - Sometimes email is missing when sync is done via ActiveSync
  - Alternative address doesn't reply to Calendar invitations
  - Kerio Connect mail client crashes with 32603 invalid response error
  - Attachments are not being detected by the message filter for signed emails
  - SMTP relay password has a length limit
  - iOS tasks are failing to sync via ActiveSync protocol
  - Webmail calendar event with attachment name using international characters will show file name in binary format
  - Error in WebMail when Grammarly add-on detects a spelling mistake
  - All-day tasks are synchronized one day earlier
  - Resources can be reserved from external calendars only if they are made available to the entire server
  - Kerio Connect client 9.3 for Windows no longer supports "Send to" function
  - Event attachments with filenames having unicode characters appear as "application/octet-stream" file type with the name "=" after the event has been saved
  - ActiveSync search command uses an invalid range when searching GALs on devices using iOS 11 and later
  - Unable to remove contacts last name
  - WebMail is incorrectly constructing base href hyperlinks
  - Index rebuild causing email lost in differential backups
  - Fixed wrong in Polish, Russian, Chinese and Japanese translations
  - Amount of characters is limited in message filter configured to send automatic response
  - Account added to eM client via EWS shows unusual timezone behaviour when editing events
  - Forwarding an email with no body text will cause sender information to be lost
  - Meeting requests created with use of Alias in KOFF will show actual sender instead of alias
  - Items deleted from delegated inbox while using KOFF are permanently deleted instead of being moved to trash folder
  - Signed emails are always detected as with Attachments
  - Folder sharing not working over AD group
  - Attachment with long file name encoded in base64 crashes Kerio Connect
- 

**Version 9.3.1 patch 2 - December 20th, 2021****Kerio Connect**

- Apache log4j2 library upgrade to version 2.16.0 (fixing CVE-2021-44228 vulnerability).
- 

**Version 9.3.1 patch 1 - March 22nd, 2021****Kerio Connect**

- When email drafts are saved within Outlook via accounts setup with KOFF, the sender is saved as "Unknown" instead of the creator of the draft.
- 

**Version 9.3.1 - January 19th, 2021****Kerio Connect**

- Unable to join MS teams meeting through Webmail Calendar
- 

**Version 9.3.0 Patch 2 - November 30th, 2020****Kerio Connect**

- Event attachments in Russian filename loses filename after uploaded
  - Printing Attached Emails shows the Date of the Host Email Instead of the Attached Email
  - SSL Certificate becomes untrusted after upgrading to 9.3.0 (CentOS, RHEL)
  - AV Updates fail on CentOS, RHEL
  - Webmail Inbox Notifications for shared mailboxes where the user is not Owner.
- 

**Version 9.3.0 Patch 1 - October 23rd, 2020****Kerio Connect**

- All-day Calendar event displayed on the previous day in some timezones
  - Mailserver process crashes due to DKIM CheckSignature (libdkimpp/libcrypto-kt.1.1)
  - On iOS via ActiveSync error is returned ParseCalendarContent: Unknown method: 6
  - Webmail crash with NestingLevel error
- 

**Distributor Schweiz**

**Version 9.3.0 - September 23rd, 2020****Kerio Connect**

- + TLS 1.3 Support for HTTPS connections (EWS / ActiveSync / Web)
  - + TLS 1.3 Support for IMAPS connections
  - + TLS 1.3 Support for SMTPS connections
  - + TLS 1.3 Support for POP3 connections
  - KoffRtfWrapper.exe process sometimes crashes
  - Update checker does not fallback to HTTP
  - User Office field is not synchronized from AD
  - CardDAV Sync not fully working with Shared Folders on Mac OSX
  - No desktop notification for INBOX subfolders
  - Webmail bug - Cannot open MS Teams link in webmail

  - Related messages were not grouped together on BlackBerry 10 devices connected by Exchange ActiveSync.
  - Full-text store can be created now on a virtual disk or empty partition and ignores default system folders.
  - Fixed problem with read-only exceptions of recurrent events in Microsoft Outlook for Mac 2016.
  - Fixed issue with incorrect encoding of PDF attachments in Microsoft Outlook for Mac 2016.
  - Sendmail utility now uses server FQDN instead of a hostname as an alternative sender email domain.
  - POP3 download sorting rules could incorrectly match some custom email headers (eg. Received-SPF).
- 

**Distributor Schweiz**

- ! Exchange ActiveSync: Rename and move operations are not allowed anymore for shared and public folders.
- Kerio Active Directory Extensions (KADE) installer failed to run on Microsoft Windows 10 even if Remote Server Administration Tools (RSAT) are installed.
- Fixed Quota notification reports when affected user has no full name.
- XMPP service did not sync user details after server default certificate change.
- Fixed possible duplication of CardDAV groups.
- Fixed password change notification on macOS with shared CardDAV accounts.
- Fixed shared calendar rights when removing through Kerio Outlook Connector.
- Fixed time zone offset issues.
- Fixed Jabber service status in Administration services view.
- Opening property databases could fail when Data Deduplication is enabled on Microsoft Windows Server.
- Fixed few stability issues.

#### **Kerio Connect Client application for Mac and Windows**

- Attachment with national or special characters in the name could not be sent from Microsoft Word or Microsoft Windows file explorer.
- Some HTML links were opened directly in Kerio Connect Client application instead of the default web browser.
- Fixed a problem with the system registry update during the installation/uninstallation on Microsoft Windows.
- Keyboard navigation did not work properly in the contact list.
- Some name characters of downloaded files are incorrectly encoded.

#### **Kerio Connect Administration**

- Users mapped from a directory service did not inherit access rights from a group.
- Recovery items are not related to Deleted Items folder only (an item type is respected)

#### **Kerio Connect Client**

- + User can now use email addresses also for domain aliases.
- + Upload progress can be aborted now.
- \* Email addresses that include multiple hyphens in domain name pass validation in new email composer.
- \* Fixed displaying of read email as unread in Trash.
- \* Email attachments added with drag&drop preserve their file names.
- \* Calendar search shows events in visible calendars only.
- Download all attachments can fail if a connection was established via Apache proxy server.
- Contact avatars were not displayed in a contact group.
- Fixed "Display images" in an email body for Safari 6.X and 7.0.X.
- Fixed error message when printing calendar with 2 repeating events starting at midnight.

#### **Kerio Outlook Connector**

- + Added possibility to work with "Send Notification" filtering rule containing custom Subject.
- \* Spam action used in mapped folder moves message to a private Junk Email folder.
- \* Not Spam action used in mapped folder moves message to a private Inbox folder.
- Fixed incorrectly displayed start/end time of all-day events created on iOS devices.
- Fixed crash when updating start/end time of recurrent events with exceptions.
- Items in mapped calendar marked as private no more prevent sending calendar detail by email.
- Name of items in mapped calendar marked as private is correctly translated.
- Work with profile configuration when authenticating to Kerio Connect is much faster now.
- Weekly events with frequency of every 2 weeks (or less) are no more displayed one-week shifted.

---

### **Version 9.2.1 - December 1st, 2016**

#### **Kerio Connect**

- Fixed synchronization of repeated events in Microsoft Outlook 2016 for Mac.
- Fixed non-working ZIP attachment filter on Windows.
- Apple Mail could unexpectedly quit when synchronizing EWS (Exchange) account.

#### **Kerio Connect Client application for Mac and Windows**

- + Added spell-checking for clients on OS X 10.11, macOS Sierra and Microsoft Windows 8 and higher.
- Fixed missing translations in context menus.
- Attachment download could not work correctly in some cases.
- Delete hotkey could stop work in mail list after composing a new message.
- Fixed some issues with composing S/MIME signed messages in a new window.
- Autodiscovery process now works properly for users in for non-primary domain.
- Windows Defender could cause slowness of Kerio Connect Client.

#### **Kerio Outlook Connector**

- Some emails could be displayed as plaintext in Microsoft Outlook in a combination with certain Outlook add-ons.

#### **Kerio Connect Client**

- Improved visual feedback when changing Chat conversations & fixed invalid scroll position.

---

### **Distributor Schweiz**

- 
- Fixed showing external images in email draft without asking.
- 

**Version 9.2.0 - October 25th, 2016****Kerio Connect**

- + New Kerio Connect Client applications for Windows and Mac.
- + Added push notifications for CardDAV (iOS, macOS) and IMAP (iOS).
- \* Improved Exchange Web Services compatibility with mobile and desktop clients.
- \* Service start on CentOS 7 now waits for all network and local filesystem services.
- \* Upgraded OpenSSL library to version 1.0.1u.
- Apple Calendar on OS X 10.11 may become unresponsive when editing an event in a public calendar.
- Microsoft Outlook 2016 for Mac with Exchange Web Services account could cause high CPU usage while synchronizing shared calendars with many events.
- Notification about expired mailbox quota could be delivered more frequently than configured.
- Fixed a problem during server shutdown initiated by administrator when server was doing a mailbox maintenance.
- VCARD with lowercase attributes may not be completely synchronized to Exchange ActiveSync clients.
- Fixed push authentication for CalDAV on iOS.
- Fixed occasional delay when message is being sent by ActiveSync on BlackBerry 10.
- Fixed occasional slow attachment download by ActiveSync on BlackBerry 10.

**Kerio Connect Client**

- + Added support for desktop notifications in Microsoft Edge.
- + When loading attendee/resource presence status spinner is displayed instead of 'not available'.
- + vCard email attachment can be directly saved as a contact.
- + In chat, Shift+Enter wraps a line as well as Ctrl+Enter.
- \* Improvements in email preview (all the header information displayed directly; high priority label emphasized; improved certificate issue warnings).
- \* New design of email autocomplete with contact photos.
- \* Better performance in email composer and in email preview.
- \* Attachments are not visible if the email is encrypted and certificate store is closed.
- \* Date separator in chat displayed only once for each day.
- \* Time fields in event editor accept all possible time formats regardless of user locale.
- \* Contact list ordering and grouping improved.
- A specific instance of public recurrent event could not be changed.
- Data is not lost when moving contacts between folders.
- Internet Explorer 10 is not a supported browser.
- Blank window is not opened when opening attachment in external app.
- Reminder is not dismissed when desktop notification is closed.
- Improved performance when moving contacts between folders.
- Sharing dialog constrained to the browser viewport, its buttons displayed correctly.
- Action buttons could be hidden in sharing window with many users.

**Kerio Outlook Connector**

- Groupware folder deleted in Kerio Connect Client may not be removed from Outlook.

**Kerio Connect Administration**

- + Added an option for remote administration and management through the MyKerio service.
- \* Integrated Bayes antispam filter is optional for Kerio Anti-spam.
- Company location is properly used in domain footer.
- Fixed adding Message filter rules in MSIE 11.
- Many small bug fixes and translation improvements.

**Kerio Connect Appliances**

- \* Operating system was upgraded from Debian 7 to Debian 8.
  - \* OVF Format has been updated from 0.9 to 1.0 for better compatibility.
  - \* Hardware in Virtual Appliances is upgraded to 2 CPUs and 2GB of RAM.
  - \* UFW is now enabled by default in Kerio Connect Virtual Appliance.
  - ! Dropped support for vSphere Hypervisor 5.0, minimal required version is vSphere Hypervisor 5.1.
- 

**Version 9.1.1 - August 8th, 2016****Kerio Connect**

- Fixed auto-discovery scheme for Exchange ActiveSync.
  - Opened folders were reported in product administration when computing a domain quota.
  - Upgrade from previous version could fail due to the old license files present in a product directory.
  - Fixed user statistics for Secure XMPP connections.
  - Improved stability and reliability of Instant Messaging.
  - Fixed stability issues.
- 

**Distributor Schweiz**

**Kerio Connect Client**

- Calendar view settings is now shared with all browsers used by the user.
- Read and delivery receipt request option in email composer now respects global setting in Kerio Connect Client.
- Improved performance when expanding Distribution list.
- Chat presence notifications were not reliable in Safari 6 on OS X Mountain Lion.
- Fixed some issues when creating or moving contacts.
- Resource availability is displayed properly in event editor

**Kerio Connect Administration**

- \* Fixed error during Remote server upgrade to Kerio Connect 9.1 (501 Method not implemented).
- 

**Version 9.1.0 - Jul 12th, 2016****Kerio Connect**

- + Added support for Ubuntu 16.04 LTS (64-bit).
- + Added IPv6 support for Sender Policy Framework spam test.
- + The Out of office auto-response is not sent if the incoming email contains the "X-Auto-Response-Suppress: OOF, AutoReply" header.
- + Disk space can be limited for a domain, and the amount of quota used can be viewed.
- \* Kerio Connect uses a new type of database to store MAPI properties.
- Kerio Anti-Spam filter does not add negative spam points for messages with neutral result.
- Attachment filter now can detect attachments with incorrectly encoded filenames.
- Kerio Connect can search messages and events with Message-ID or UID longer than 64 characters.
- Emails sent from iOS devices through Exchange ActiveSync are reformatted to be RFC 5822 compliant.
- BlackBerry 10 devices connected via Exchange ActiveSync display encrypted messages correctly.
- Devices connected via Exchange ActiveSync are always notified about message deletion.
- All event reminders on Exchange ActiveSync devices are sent correctly.
- AutoDiscover for Exchange ActiveSync devices sends a correct response.
- Synchronization of messages in Outlook 2016 for Mac does not stop unexpectedly.

**Kerio Connect Administration**

- \* Kerio Connect displays the SSL certificate chain, and enhanced information about server SSL certificates.

**Kerio Connect Client**

- + Added Instant Messaging to Kerio Connect Client.
- + Added user presence status (online, offline, etc.).
- + Users can insert inline images into email text and email signature.
- + Users can disable the automatic message preview after selecting a folder to protect privacy.
- + Selection of a message is preserved after changing sorting or switching between folders.
- + Users can show more columns in mail list when mail preview is bottom or hidden.
- + Kerio Connect Client can now display up to 500 emails per page. You can change the number in the Kerio Connect Client settings.
- + Added the option to display To: column in horizontal mail list view.
- \* The event editor size and location automatically adjusts to the browser window.
- \* The event editor has been redesigned for better readability of read-only events.
- \* The event editor supports hyperlinks in the Where and Description fields.
- \* The monthly calendar view has been redesigned.
- \* Event colors set by external devices are handled more accurately.
- \* Contacts starting with special characters now group together in the contact list.
- + Contacts include a quick contact/action context menu.
- + Users can create new contacts directly from vCard email attachments.
- \* Improved design of contact photos and thumbnails.
- \* Contact editor now validates the email address format. Email messages cannot be sent to an invalid address.
- Newly subscribed folders refresh automatically.

**Kerio Outlook Connector**

- Multiple accounts with unsaved passwords in a single profile no longer cause any issues.
- Quick search in Sent Items now searches through the message body.
- Folders with a group containing a space in the name can be shared.
- Several stability issues are addressed.

**Kerio IMAP Migration Tool**

- \* Improved the Kerio IMAP Migration Tool performance, especially when migrating to a server on Linux.
- 

**Version 9.0.4 patch 1 - May 26th, 2016****Kerio Connect**

---

**Distributor Schweiz**

- 
- Fixed possible email modification when scanning certain messages with Kerio Anti-spam.
- 

**Version 9.0.4 - May 10th, 2016****Kerio Connect**

- \* Upgraded OpenSSL library to version 1.0.1t.
- Fixed problem with stopped synchronization of new messages in Microsoft Outlook for Mac 2016 (version 15.21).
- Fixed a potential stability issue.
- Fixed a stability issues when using Airmail client.

**Kerio Connect Administration**

- Fixed localization for Kerio Anti-spam setting.
- 

**Version 9.0.3 - April 14th, 2016****Kerio Connect**

- + Kerio Anti-spam (powered by Bitdefender).
- + Unsupported EWS requestes are now logged.
- Fixed access to Public folders in Microsoft Outlook 2016 for Mac.
- Performance issues when using Exchange account in eM Client are solved.
- Fixed matching of localhost IP address in IP address groups on dual-stack IPv4/IPv6 server.

**Kerio Connect Client**

- + Resource managers can add and edit events directly in resource calendars.
- Increased level of contrast in various elements in Kerio Connect Client.

**Migration Tools**

- Fixed adjustment of IP address in Kerio IMAP Migration Tool.
- 

**Version 9.0.2 - February 23rd, 2016****Kerio Connect**

- + SPF checks IPv6 addresses.
- + Ephemeral Diffie-Hellman key exchange is enabled by default for TLS.
- + Multiple active SSL certificates allowed on one server.
- \* Upgraded OpenSSL library to version 1.0.1q.
- \* Upgraded Apache SpamAssassin to version 3.4.1.
- \* Increased SpamAssassin email body size limit to 1MB.
- \* Improved the detection of the server time zone: Moscow, St.Petersburg, Volgograd (RTZ 2).
- \* Added support for IMAP ID - client identification - for Thunderbird 8.
- Password expiration counter is reset after enabling the password expiration feature for local users.
- The issue with messages that cannot be found via IMAP search is fixed.
- Full text search can be restarted if slowed by a large mailbox.
- Fixed binding domain to IP address that could break NTLM.
- Fixed SmartForward configured on Windows Mobile that could deadlock account on Kerio Connect server.
- \* SSL/TLS settings for SMTP(S) services are separate from other server settings.

**Kerio Connect Administration**

- Search box in Administration works for new features.

**Kerio Connect Client**

- \* Increased level of contrast in various elements in Kerio Connect Client.
- \* Added support for Safari 9.1.
- Fixed minor issues in Kerio Connect Client calendars.

**Kerio Outlook Connector**

- + Added possibility to use an alternative email address when sending meeting replies to prevent attendee duplication by the organizer.
- 

**Version 9.0.1 - December 14th, 2015****Kerio Connect**

- Free-busy in Outlook for Mac works correctly.
- Fixed some stability issues.

**Exchange ActiveSync**

---

**Distributor Schweiz**

- Android 6 allows data synchronization without requiring device password to be set.
- Android 6 sends reply and forward messages.
- Synchronization in mailboxes with a large number of folders and messages in the desktop version of MS Outlook runs without failing.
- Synchronization runs without failing with "invalid SyncKey" message in the warning log.
- Deleting messages from the Trash folder on a device also deletes them on the server.
- Slow downloading of attachments runs without stopping and increasing the CPU usage.

**Kerio Connect Administration**

- Filter rules are displayed correctly.

**Kerio Connect Client**

- \* Minimum supported resolution increased to 1152x768.
  - Fixed minor graphics glitches.
  - Photos in contacts are uploaded correctly in MS Internet Explorer 10.
  - Certificates from digitally signed messages are saved when you reply to the messages.
  - Contents of the email previews are displayed correctly.
  - Unread count icons are always visible in the folder tree.
- 

**Version 9.0.0 - November 18th, 2015****Kerio Connect**

- + Added IPv6 support for services in Kerio Connect - listening on IPv6 addresses.
- + Server-wide email filtering rules for both received and sent messages.
- \* Improvements in Kerio Connect Client push notification mechanism.
- Optional attendees were not visible in calendar events created by the auto-scheduling functionality.
- Fixed occasional crashes during SQLite database operations.
- Fixed the Certificate Signing Request formatting.
- Signing/encryption of emails could hang in some cases.
- Standard ephemeral Diffie-Hellman key exchange is now disabled by default for TLS.
- Fixed occasional freezing of Account Assistant on running applications check.
- Instant messaging archive includes messages timestamps.
- \* Kerio Connect Client is now a primary interface for web access, replacing legacy client interfaces.
- \* Old Webmail Mini was removed.

**Kerio Connect Multi-Server**

- Fixed couple of issues during backend role deployment.
- Incorrect sender host address in mail log fixed.
- User migration between backends might fail in some cases.
- The 'maximum number of messages per hour from one IP' restriction in SMTP server settings is working now.
- MySQL server was periodically restarted in some circumstances.
- Fixed incorrect hostname in the server role setup dialog.
- Managing resource calendars fixed.
- Fixed couple of security issues.

**Kerio Connect Administration**

- \* New Audit log file for tracking all user logins.
- \* IPv6 support.
- \* Server-wide email filtering rules for both received and sent messages.
- \* Remote server upgrade can be initiated from web administration.

**Kerio Connect Client**

- \* A brand new modern design for better readability. Includes new workflows for managing your emails, calendars, contacts, tasks and notes.
  - \* New unified toolbar for all views (emails, calendars, contacts etc.).
  - \* New interface for calendar.
  - \* New interface for tasks.
  - \* New interface for notes.
  - \* New popup event editor in calendar view.
  - \* New information panel in calendar view for invitation.
  - \* Reply, reply all and 'more' don't scroll when reading through a long email.
  - \* Pull 'forward' out of "More" options and put at top of email msg.
  - \* Improvements in Kerio Connect Client push notification mechanism.
  - Signing/encryption of emails could hang in some cases.
- 

**Version 8.5.3 - October 12, 2015****Kerio Connect**

---

**Distributor Schweiz**

- 
- + Added support for OS X 10.11 El Capitan.
  - + Added support for iOS 9.
  - Fixed auto-configuration tool compatibility with OS X 10.10.5 when server uses self-signed SSL certificate untrusted for the system.
  - Fixed GAL synchronization when using modified mapping file.

**Kerio Connect Client**

- + Added support for Safari 8.1 and 9.
- Fixed issue with public folder rename.

**Kerio Outlook Connector**

- + Added support for Microsoft Office 2016.
  - Fixed upgrade from previous Kerio Outlook Connector versions (8.5.1 and lower) running on Windows 10.
- 

**Version 8.5.2 patch 1 - August 27th, 2015****Kerio Connect**

- Fixed delivery of new messages in Outlook 2011 for Mac
- 

**Version 8.5.2 - August 24th, 2015****Kerio Connect**

- + New Kerio Connect Sync application for Android providing synchronization of Calendars, Tasks and Contacts. Available in Google Play Store.
- + Added support for Microsoft Outlook 2016 for Mac.
- + Added support for Windows 10 Mail and Calendar.
- Fixed SMTP connections from front-end proxy in Multi-Server.
- Fixed synchronization of messages with invalid UTF-8 characters over Exchange ActiveSync.
- Fixed Samsung mobile synchronization with Exchange ActiveSync 14.1.
- Fixed few potential stability issues.

**Kerio Connect Client**

- Fixed issue with HTML attachment download.
- 

**Version 8.5.1 - June 22, 2015****Kerio Connect**

- \* Fulltext and instant messaging services upgraded to Java 8.
- \* Added an option to blacklist EAS 14 for certain mobile devices in mailserver.cfg.
- + Support for plug-in integration with Kerio Connect Client mail composer.
- Fixed Exchange ActiveSync problem with contact synchronization (some data could be hidden in a contact after contact update).
- Fixed format of SSL server certificate request (CSR) to make it compatible with Thawte.
- Fixed EWS MAPI conversion problem on 64-bit systems.

**Kerio Connect Client**

- + Basic support for Edge browser on Windows 10.
  - Fixed occasional attachment upload issue in Kerio Connect Client with Microsoft Internet Explorer 8 and 9.
- 

**Version 8.5.0 - May 18, 2015****Kerio Connect**

- + Added support for Debian 8 Jessie (64-bit).
  - + CalDAV clients and Kerio Connect Client can define additional "travel time" for each event in a calendar.
  - + Added support for Exchange ActiveSync 14.1.
  - \* Reply and forward flags are now synchronized via Exchange ActiveSync from iOS devices to the server.
  - \* OpenSSL library upgraded to version 1.0.1m.
  - \* Server SSL certificate and Certificate signing request is created with SHA-256 signature.
  - \* Anti-hammering extended to SASL authentication methods.
  - \* Informational messages about HTTPS redirection for each HTTP request moved to debug log.
  - \* For subscribing shared folder in any IMAP client, it is necessary to map it in Kerio Connect Client first.
  - \* Microsoft Entourage 2004 and 2008 clients are no longer configured with auto-configuration tool.
  - Adding a domain footer into a message sent from Blackberry Z30 could render email body unreadable.
  - Password length limit for POP3 downloader accounts was too low.
  - Fixed IMAP folder synchronization in eM Client.
  - Fixed an issue with accessing shared folders over IMAP.
- 

**Distributor Schweiz**

- Fixed attachment names containing national characters in Kerio Connect Client.
- Offline messages in XMPP could be re-delivered after an upgrade to new server version.
- Fixed couple of server stability issues.

**Kerio Connect Multi-Server**

- + Users can share folders between multiple servers.
- + Added distributed SpamAssassin version for all servers.
- + Added node monitoring with Zabbix.

**Kerio Connect Client**

- + Added more formatting options for email editor - fonts, indentation, etc.
- + Support for travel time for events in a calendar.
- + Added new calendar agenda view.
- + Login dialog can be customized in product administration.
- + Added improved calendar printing.
- + Added possibility to create/modify recipient's contact directly from email.
- \* Improved mail filters configuration.
- \* A new mail filter can be created directly from the message.
- \* Mail folders show total number of messages.
- \* Internet Explorer pinned app.
- \* Possibility to add sender to the spam whitelist.
- \* A brand new About dialog displaying product version and contact information.
- \* Improved time format configuration in Settings.
- \* New notification about password match when changing password in Settings.
- \* Forwarded message now contains more email headers from original message.

**Kerio Connect Administration**

- \* A new Sophos Live Protection option in Antivirus setting.
  - \* Customizable login dialog for Kerio Connect Client.
  - Fixed some translation typos.
- 

**Version 8.4.3 - April 16, 2015****Kerio Connect**

- + Fixed problem with message sending in Apple Mail with Exchange account on OS X 10.10.3 Yosemite.
- 

**Version 8.4.2 - March 10, 2015****Kerio Connect**

- + Support for Sophos Live Protection implemented.
  - + Timezone definitions updated.
  - Fixed potential stability issues when using Apple Mail with Exchange account.
- 

**Version 8.4.1 - January 21, 2015****Kerio Connect**

- \* Improved stability.
- \* Contact photos are now displayed within Messages on Yosemite.
- More secure default SSL/TLS configuration (AES-GCM ciphersets are now preferred).
- Item duplication with Microsoft Entourage fixed.
- Fixed the problem of upgrade installation on Windows which may fail when there are some national characters in mailserver.cfg file.
- Windows Phone devices are recognized as supported again.

**Kerio Connect client**

- Name of email attachment in cyrillic was corrupted after download.
- Fixed issue with higher number of missed tasks reminders.

**Kerio Connect Administration**

- It was impossible to define adresses for forwarding in user template.
- 

**Version 8.4.0 - December 3, 2014****Kerio Connect**

- \* OpenSSL library upgraded to version 1.0.1j to prevent MITM protocol downgrade to insecure SSL 3.0 protocol (CVE-2014-3566 "POODLE").
- 

**Distributor Schweiz**

- \* Uninstaller is signed with a new signature to remove warning that signature cannot be verified.
- \* EAS 12.1 full implementation.
- Fixed issues with shared calendar names in Apple Calendar on Yosemite.
- Performance optimization of processing recurring events in iCal.
- Fixed detection of homeserver in distributed domain if internet hostname and server hostname differ.
- Optimization of read/write locking to avoid problems with corrupted properties.fld.
- Solved issue with redelivery of instant messages after server upgrade.

**Kerio Connect client**

- \* Better performance.
- \* Improved stability.
- \* Automatic push refresh.
- \* Address book in mail composer.
- \* New spam settings.
- \* New URL editor in mail composer.
- \* Added possibility to copy/move all emails to folder.
- \* Added possibility to accept/reaccept/decline events with a comment.
- \* New reminders.
- \* New dialog for folder sharing.
- \* New dialog for subscribing folders.
- \* Mapped folders in hierarchical tree instead of flat list.
- \* Custom login dialog for Kerio Connect client.
- \* Added possibility to share all folders.
- \* Improved email printing from Kerio Connect client.
- \* Added possibility to use certificates with multiple email addresses.
- \* Content of KCC is blurred (Gecko, Webkit) or masked (IE) when session expires.
- \* Added new event button.
- \* Request for delivery receipt.
- \* Delegation improvements in KCC.
- \* Performance during folder rendering improved.
- Fixed behaviour when user wasn't able to turn webassists off.
- Attachments with long filenames containing underscores lost the underscores.
- Meeting reply showed date of 1899 in Sent folder in Kerio Connect client
- Fixed crash in Safari 7.1 and 8.0
- Timezone definition for Georgetown Guyana was incorrect.
- Work phone field added to domain footer editor.
- Sorting: Reverse order of items when sorting by priority or unread was used.
- Kerio Connect client did not show all archived messages.
- Added support for m-files urls.

**Kerio Connect Administration**

- \* New Kerio News tile in dashboard.
- \* Settings for custom login dialog.
- Fixed problem with national chars in a new certificate.
- It was impossible to save statistics in Italian.

**Kerio Connect Multi-Server Technology Preview**

- \* HTTP/IMAP/POP3 reverse proxy.
  - \* Virtual appliance for proxy, syslog, back-end servers and directory server.
  - \* Puppet server for central management.
  - \* Users & Groups management using WAM.
- 

**Version 8.3.4 patch 1 - Oct 24, 2014****Kerio Connect**

- Fixed an issue with failing outbound secure connections.
- 

**Version 8.3.4 - Oct 23, 2014****Kerio Connect**

- \* OpenSSL library upgraded to version 1.0.1j to prevent MITM protocol downgrade to insecure SSL 3.0 protocol (CVE-2014-3566 "POODLE").
- 

**Version 8.3.3 - Oct 16, 2014****Kerio Connect**

- + Added support for Apple Mac OS X Yosemite.
- 

**Distributor Schweiz**

- 
- + Enabled S/MIME encryption for iOS8 profiles.
  - \* Updated Russian timezone definitions.
  - Fixed server hang during shutdown.
  - Fixed couple of stability issues in Exchange ActiveSync protocol implementation.
  - Fixed DKIM public key matching.
  - Fixed synchronization of messages with unicode characters over Exchange Web Services.
  - Fixed the non-functional fulltext search after a server migration from/to Mac OS X.

**Kerio Connect client**

- Added support for Safari 6.2, 7.1 and 8.0.
- Fixed a XSS problem in admin port redirect.
- Fixed CWE-79 and CWE-98 vulnerabilities.

**Kerio Connect Administration**

- Added support for Safari 6.2, 7.1 and 8.0.

**Kerio Outlook Connector (Offline Edition)**

- The Jerusalem timezone doesn't change to Cairo anymore.

**Kerio Connect Virtual Appliance**

- Added missing security repository reference.
- 

**Version 8.3.2 - August 11, 2014****Kerio Connect**

- \* Delegators can choose whether they want to share their INBOX folder now.
- \* Cross-domain sharing is again possible in this version.
- \* Number of connections to directory servers has been significantly reduced.
- \* There is no limit for the number of domains mapped from directory server(s) any more.
- \* Microsoft ActiveSync protocol implementation has been improved.
- Read flag was sometimes displayed incorrectly.
- Fixed a minor issue in CalDAV.
- Fixed a bug in Microsoft ActiveSync push notification implementation.
- Fixed several stability issues.

**Kerio Connect client**

- Improved behavior of the popup error dialog.
- Some distribution lists could not be edited.

**Kerio Outlook Connector (Offline Edition)**

- Some calendar invitations might have caused a synchronization conflict.
  - Fixed several stability issues.
- 

**Version 8.3.1 - June 23, 2014****Kerio Connect**

- + Added support for certificates with multiple email addresses.
- + Added support for certificates where email(s) are defined in the subject alternative name field.
- OpenSSL library upgraded to version 1.0.1h to fix a SSL/TLS man-in-the-middle vulnerability (CVE-2014-0224).
- IM service failed to start if mail archive folder did not exist.
- Weak SSL ciphers were disabled for IM service.
- Fixed several Exchange ActiveSync stability issues.
- Plain text e-mails with certain invalid character encodings were generating a lot of Exchange ActiveSync errors into the server error log.
- Some e-mails signed in Kerio Connect client were corrupted in MS Outlook 2013.
- Plain text messages were displayed in a single line on some mobile devices.
- The attachment filter might work incorrectly in some cases.
- Apple Mail sometimes displayed an error dialog when deleting e-mails in IMAP account.
- CalDAV SSL connection was incorrectly configured with Account Assistant on Mac OS X 10.9.3.

**Kerio Connect client**

- An e-mail signed in Kerio Connect client was unreadable in MS Outlook 2013.
  - Mail filters were unable to save.
  - Some special folders (Trash, Sent Items, Drafts, Junk E-mail) could not be shared.
  - It was impossible to type some czech national characters into the attendee list.
  - Fixed a problem with logging into Kerio Connect client when the integration with Kerio Operator was enabled.
  - Integration page for mobile devices asked to continue unsecured even if connected over https.
  - Integration page did not work correctly on standard https port i.e. 443.
- 

**Distributor Schweiz**

- Fixed several stability issues.

**Kerio Connect Administration**

- User selected columns in the list of company locations were forgotten after logout.

**Kerio Outlook Connector (Offline Edition)**

- Users were unable to remove a custom email/reply-to address.

**Kerio Outlook Connector**

- Automatic update did not work.
  - Address book could not be open.
- 

**Version 8.3.0 - May 20, 2014****Kerio Connect**

- \* Configuration Wizard removed from Kerio Connect installers and turned into a web application.
- Device wipe of Exchange ActiveSync enabled devices works after a password change, now.
- Attachment filter did not work correctly for messages with HTML footer containing an image.
- Synchronization of task status to iOS mobile devices via Exchange ActiveSync could be unreliable.
- Line endings in task created on Windows Phone mobile device could be removed during synchronization due to a bug in mobile device.
- Domain aliases could not be used in SMTP together with the anti-spoofing feature.
- User quota status might become incorrect on some filesystems.
- CalDAV scheduling invitations were optimized in subscribed shared calendars.
- HTML format of bodies of calendar events is now supported on Exchange ActiveSync enabled devices.
- Exchange ActiveSync synchronization issues on folders containing messages with high UID numbers.
- Performance of Exchange ActiveSync protocol has been improved.
- Several stability issues have been solved.
- The event location field was not auto-filled for Mac OS X Mavericks CalDAV accounts.
- + The Exchange account type of Internet Accounts on Mac OS X is supported now for Apple Mail, Calendar and Contacts.
- Kerio Account Assistant sometimes failed to install a configuration profile.
- DNS requests might fail in some circumstances.
- Kerio Account Assistant failed to install the configuration profile in some cases.
- A title of an event might get lost in Apple Calendar client.
- The \*\*SPAM\*\* prefix is removed from a message subject when the message is marked as not a spam, now.
- Workaround for Apple Mail when stuck in infinitely fetching new emails.
- Other minor improvements and bugfixes.

**Kerio Connect client**

- + S/MIME - support for sign/encrypt message in Kerio Connect client.
- + Management of Exchange ActiveSync devices in Kerio Connect client.
- + Added possibility to remove auto created contacts in mail composer.
- Spam prefix is removed from subject if a message is marked as not spam
- Italian translation improved.
- Added support for Internet Explorer 11.
- Fixed issue with HTML signature.
- Improved stability on iPad.
- URL with colons was broken in Kerio Connect client.
- Fixed design issues with zoom in Chrome.
- User timezone might get changed together with a language update.

**Kerio Connect Administration**

- + User profiles in administration console.
- + Domain footers with user and company details.
- ! Discontinued support for Internet Explorer 7.
- Fixed problem with user password change by domain administrator.

**Kerio Outlook Connector (Offline Edition)**

- + It is possible to add more KOFF accounts to the single profile.
  - + Address in From field can be selected from the drop-down list of aliases.
  - + Voting buttons are supported in Outlook.
  - + Follow up flags for Recipients are supported in Outlook.
  - + Kerio Connect rules are offered when opening Outlook Rules and Alerts.
  - Custom sender settings are saved even in offline
  - It is possible to modify copied default folders.
  - It is possible to import forwarded contacts with photos (except of Outlook 2003).
  - Read flag is synchronized from KOFF even if the message is opened in Outlook.
  - Messages sent from shared stores (not delegated stores) are no more sent on behalf of the store owner.
- 

**Distributor Schweiz**

- Fixed issues when installing KOFF to the custom path.
- Using KOFF and IMAP for the same mailbox no more leads to the multiplication of Junk E-mail folder.
- Outlook no more displays plaintext body instead of html with some Outlook addins installed.

**Kerio Exchange Migration Tool**

- Kerio Exchange Migration Tool is also available as a 64-bit binary, now.
  - Fixed creation of duplicated folders with different letter case.
- 

**Version 8.2.4 - April 9, 2014****Kerio Connect**

- Fixed OpenSSL vulnerability CVE-2014-0160.
- 

**Version 8.2.3 - March 17, 2014****Kerio Connect**

- \* Open Directory user authentication uses Pluggable Authentication Modules (PAM).
- Improved stability of Kerio Connect.
- Memory consumption has been optimized.
- Apple Contacts could display shared contacts instead of personal contacts.
- Mac Autoconfig Tool could not install configuration profile on Mac OS X 10.9.

**Kerio Connect client**

- Improved stability of Kerio Connect client.
  - Name of email attachment in cyrillic was corrupted after download.
  - Opening a pdf attachment in new window in MS Internet Explorer 11 crashed Kerio Connect client.
- 

**Version 8.2.2 - December 12, 2013****Kerio Connect**

- + Added support for default event alarms in Apple Calendar on Mac OS X 10.9 Mavericks.
- + Added support for Microsoft Windows 2012 R2.
- Improved stability during synchronization via Exchange ActiveSync.
- Calendar events created on BlackBerry device with OS 10.2 are correctly synchronized to Kerio Connect now.
- Read-only shared calendars no longer show meeting invitations in Apple Calendar.
- Resources were not auto-completed in Apple Calendar on Mac OS X 10.9 Mavericks.
- Shared calendars have initially the same color as they have in owner's mailbox.
- Fixed contact synchronization in Exchange ActiveSync when deleting more contacts at once.
- Fixed kmsrecover utility warning about invalid message store path.
- Some meeting invitations could be marked as outdated after synchronization with iOS over Exchange ActiveSync.

**Kerio Connect client**

- Login page rendering sometime took long time on slow connection.
- Scroll wheel didn't work in mail list on Microsoft Internet Explorer 11.
- Microsoft Internet Explorer 11 sometime got stuck at "Loading".
- New lines were removed from notes in contact editor.

**Kerio Outlook Connector (Offline Edition)**

- It was not possible to set another sender email address.
- 

**Version 8.2.1 - November 7, 2013****Kerio Connect**

- Fixed possible event duplication on Motorola RAZR HD mobile phone.
- Events with no reminder created in Kerio Outlook Connector could be synchronized with 15 minutes reminder to mobile device via Exchange ActiveSync.
- Fixed stability issue during conversion from plain text to HTML during synchronization via Exchange ActiveSync.
- Accepting invites via Exchange ActiveSync is now reflecting in Kerio Connect client.
- Local domain was used in outgoing SMTP communication.
- Order of subscribed shared calendars in Apple iCal/Calendar list was not preserved.
- Fixed auto-configuration of public contacts in Apple Address Book/Contacts when using Account Assistant.
- Auto-configuration tool is now compatible with OS X 10.9.

**Kerio Connect client**

- Fixed stability issue during sending messages from new window on Internet Explorer 8.
  - Enter closed event editor when user tried to select end time.
- 

**Distributor Schweiz**

- Translations updated.
- Quota warning was not shown immediately after reaching the limit.

**Kerio Connect Administration**

- Removed password policy restriction for PAM authentication.
- Generate password button is disabled for LDAP user.
- Translations updated.

**Kerio Outlook Connector (Offline Edition)**

- Fixed stability issue during ICS file import.
- Fixed stability issue during synchronization of folder deletion.
- It is no longer necessary to restart the Outlook, when the message synchronization spontaneously stops.

**Kerio Exchange Migration Tool**

- Fixed migration of public folders if they are set as global for all domains.
- 

**Version 8.2.0 October 8, 2013****Kerio Connect**

- + Improved interoperability of Out Of Office replies by using a sender email address.
- + OpenSSL library upgraded to version 1.0.1e.
- + Added delegation for Microsoft Outlook (MS Windows, OS X).
- + Improved stability of engine.
- + Added support for multi-user / group chat in Instant Messaging.
- + Added support of attachments synchronization for BlackBerry 10.
- + Decreased CPU usage during CalDAV synchronization.
- + Better handling of task requests in Outlook for Mac (EWS).
- + Added Sender Anti-Spoofing security feature.
- + Added DomainKeys Identified Mail feature.
- + Improved stability of search engine.
- + Added ability to subscribe to other domain users folders/calendars in MS Outlook for MAC.
- Fixed LDAP search in folders with special (national) characters.
- Solved problem with automatic update of 64-bit version on Linux.
- Fixed Instant Messaging server statistics.
- Fixed problem with Instant Messaging server, when double domain renaming.
- Many small improvements in Instant Messaging server.
- Fixed syncing tasks issue for some Samsung phone.
- Fixed stability issue during starting/stopping server.
- Fixed stability issue during recovery process.
- Fixed stability issue in IMAP server for deep search query.
- Fixed issue with task synchronization in MS Outlook for MAC.
- Fixed issue with changing permissions in delegation in MS Outlook for MAC.
- Fixed issue with losing Public folders in iCal/Calendar.

**Kerio Connect client**

- + Added possibility to change mail preview - right/bottom/none.
- + Calendar inbox was redesigned.
- + Added size of message to list of messages.
- + Delegation support.
- + Added possibility to hide folder tree.
- + Added possibility to sort emails.
- + Added possibility to chose default calendar for event creation in calendars.
- + Added possibility to relogin to server without losing context.
- + Added possibility to select folders for synchronization for CalDAV and CardDAV clients.
- + Usability of calendars was improved.
- + Improved speed of listing folder tree.
- + Improved compatibility with some invalid formatted emails.
- + Improved stability on Internet Explorer.
- Fixed problem with HTML signature.
- Fixed Safari problems with national characters in attachment name.
- Fixed highlighting of some special URLs.
- Fixed problem that users cannot change their Default and Special Reply-To addresses.
- Fixed problem with links inside html email.
- Fixed issue with missing original email address in the forwarded message.
- Removed limit for auto reply size.
- Fixed issue with creating new event by scrolling in Calendar.

**Kerio Connect Administration**

- + Added new page about System Health - CPU and Memory information.
- 

**Distributor Schweiz**

- + Added new tile of System Health to dashboard.
- + Added Password Policy.
- + Added password generator.
- + Added possibility to make bookmarks (save direct URL) to administration pages.
- + Improved behavior of dashboard tiles.
- + Added Instant Messaging activity to charts.
- Fixed user interface for antivirus settings when software maintenance expired.
- Fixed issue with no visible users in mailing lists.
- Fixed issue of exporting SSL server certificate bigger than 8 kB.

**Kerio Outlook Connector (Offline Edition)**

- + Added support for delegation.
  - + Added support for Salesforce for Outlook (versions 2.2.0 and 2.2.1).
  - + Added option to demand trusted server SSL certificates.
  - + Improved stability of Kerio Outlook Connector.
  - + Improved detection of type and name of attachment (for invalid email).
  - It was impossible to modify filter rules in 64-bit KOFF.
  - Kerio Outlook Connector sometimes couldn't connect to Connect via an Apache 2.2.16 Reverse Proxy.
  - Gmail and Hotmail displayed incomplete sender name for mails sent by Kerio Outlook Connector.
  - Fixed detection of changes in Public folders.
  - Kerio Outlook Connector was not reporting disconnected status when Connect is down.
  - Fixed problem in notes conversion.
  - Improved search for short words.
  - Fixed issue with imported ics file in Outlook not populating to server.
  - Fixed problem with flag color synchronization in Outlook 2013
  - Fixed synchronization issue with private contacts
- 

**Version 8.1.3 - August 15, 2013****Kerio Connect**

- Fixed issue in iCal/Calendar when using Public Folders.
- Fixed problem with shifted day of events sent as TNEF attachment (only Linux and Mac version of Kerio Connect was affected).
- Message sent by Outlook 2011 and replied by Apple Mail is no more marked as high-priority (only Mac version of Kerio Connect was affected).
- Fixed problem with local contacts in Apple Mail if Kerio Connect Assistant is used.
- Moved/updated calendar events are not duplicated.
- Logging of IM service fixed.

**Kerio Outlook Connector (Offline Edition)**

- \* Added support for Microsoft Office 2010 SP2.
  - Distribution list created in Connect Client works correctly.
  - Custom "Reply-To" address is correctly saved on the server.
  - Fixed rare stability issue during synchronization.
- 

**Version 8.1.2 - July 1, 2013****Kerio Connect**

- \* Improved performance of shared calendars' synchronization over CalDAV.
- Fixed problem with synchronization of VCard changes in Instant Messaging server.
- \* More efficient conversion of attached messages sent via Exchange Web Services.

**Kerio Connect Client**

- \* Added support for Safari 6.1.

**Kerio Outlook Connector (Offline Edition)**

- \* Minor stability issues resolved.
  - Fixed modification of Sieve rules in 64-bit Microsoft Outlook.
  - KOFF sometimes couldn't connect to Kerio Connect via an Apache 2.2.16 Reverse Proxy.
- 

**Version 8.1.1 - May 23, 2013****Kerio Connect**

- + Support for Sony Xperia Z
  - + Added support for Debian 7.0 "Wheezy".
  - \* Fixed problems with iCal sharing
  - \* Update of CardDAV database fixed
- 

**Distributor Schweiz**

- \* Better handling of Bcc recipients in EWS protocol
- \* Certificate parsing in IM relaxed
- Fixed installation on Linux with non standard version of dpkg.
- Fixed crash during removing users if the CalDAV database is not properly upgraded.
- Problems with EAS when updating non-existent items
- Occasional problems when stopping IM server

**Kerio Connect Client**

- \* Minor translation improvements (SK)

**Kerio Connect Administration**

- + More intuitive behaviour of Sophos antivirus configuration in WAM
- \* Dashboard improvements

**Kerio Outlook Connector (Offline Edition)**

- \* Response to meeting request is not sent if the request was sent to mailing list
  - \* Potential unwanted erasure of synchronization request fixed
  - Outlook 2013 with KOFF doesn't translate folders SentItems, DeletedItems and Drafts
  - Push doesn't work in Public folders
  - Error when expanding folders in attached resource's mailbox
- 

**Version 8.1.0 - April 30, 2013****Kerio Connect**

- + Added native support for 64-bit systems. Among other advantages the service can utilize more system memory if available.
- + Added Instant Messaging server.
- + Setting a SSL certificate active has an immediate effect and doesn't require restart any more.
- + Improved performance of folder operations in mailboxes with many folders
- + Greylisting now sends cryptographic hashes (MD5) instead of e-mail addresses
- + Added Apple Messages/iChat autoconfiguration through Account Assistant.
- + Improved reliability of Custom Spam Rules. Message header "From" and "To" rules are applied besides message headers also to message envelope members.
- + Improved stability of SpamAssasin server.
- + AppleDouble attachments handling improved in EWS.
- ! Dropped support for external antivirus modules. Replaced with Kerio AntiVirus SDK built antivirus modules.
- Fixed SSL vulnerability to BEAST attack
- Fixed rare crash in the full-text during parsing message.
- Messages could appear in Microsoft Outlook with Kerio Outlook Connector Offline Edition with long delay in some cases.
- Fixed a stability issue in Free/Busy.
- Calendar events were disappearing for few seconds in CalDAV calendars on Apple iPhone.
- A folder with incorrect name could be created over IMAP protocol.
- Domain footer is not appended to notification messages.
- A group from LDAP is correctly displayed in Microsoft Outlook Contacts.
- Fixed possible endless synchronization in ActiveSync push mode.
- Fixed a stability issue when delivering meeting event.
- Fixed an issue when Apple Contacts application could stop synchronization of server Contacts folder containing subfolders through CardDAV.
- Fixed alleged duplication when creating a new calendar through CalDAV.

**Kerio Connect client**

- + New color profiles.
  - + Added settings for marking mail as read.
  - + Added possibility to download all attachments in one file.
  - + Added image gallery with fullscreen.
  - + Added possibility edit signature in html. Current solution can in some cases damage signatures created in Old Webmail. In this case it is necessary to redefine signature in KCC.
  - + Improved compatibility with various formatted HTML emails.
  - + Communication with server was optimized.
  - + Reduced count of client/server requests for loading free/busy statuses.
  - + Reduced count of requests for working with reminders.
  - + Redesigned reminders view (and fixed memory issue).
  - + Working with attachments redesigned in read panel and in composer.
  - + New login dialog
  - + Improved stability for Internet Explorer 8 and 9.
  - + Design of client was improved.
  - + Performance improved.
  - + Improved detection of UTF-16 encoding (Big and Little Endian) if it is not properly declared in email headers.
- 

**Distributor Schweiz**

- 
- + Added possibility to make a custom localization for Kerio Connect Client.
  - \* Kerio Sync Connector was removed from integration page.
  - Fixed HTML parser problem with long string starting with www substring.
  - Fixed issues with desktop notification.
  - Fixed issue with very long email address in filters (for example from Salesforce).
  - Improved behavior of mini calendar arrows.
  - Fixed issue when contacts with private flag from shared folders are displayed.

  - Kerio Connect server sometimes crashed during startup when full-text search was enabled.
  - TNEF decoder sometimes failed to decode signed messages.
  - Email messages with invalid charset could not be downloaded to iPhone.
  - Contacts synchronized from Global Address List might contain duplicate e-mail addresses.
  - Deleted calendar events were still visible in Apple iCal in some cases.
  - Calendar events might get duplicated on HTC Android phones.
  - Fixed kmsrecover which refuses to run if Kerio Connect is running even with "-s" option to a separate store folder
- 

**Distributor Schweiz**

- Fixed performance problems and denial of new connections when Kerio Connect is running on Mac OS 10.8.
- Fixed several stability issues.

**Kerio Outlook Connector (Offline Edition)**

- + Public Folders can be configured to not be synchronized completely.
- \* Improved performance of both initial synchronization and common work too.
- \* Improved management of the size of local cache by [local] removing of bodies of old email messages (they persist in Connect).
- \* Improved capability to synchronize received ill-formed email messages.
- Fixed conflict of ICU libraries with 3d party software.
- Fixed non-working Spam button when preview pane is active in Outlook 2007 and 2010.
- Fixed rare problem of synchronization conflict upon downloading folder hierarchy.
- Fixed rare problem of synchronization conflict upon emptying the Deleted Items folder.
- Fixed out of memory problem upon downloading of a huge message
- Fixed showing of pdf attachments as .bin files in some email messages.
- Fixed synchronization conflicts after import from PST file.
- Fixed saving exception sent from subscribed calendar.
- Fixed Perth and Greenland timezone issues.
- Fixed wrong recognition of the organizer of a meeting when custom address is used.
- Fixed that reminder appears for an outdated events sometimes.
- Fixed that calendar event could be deleted if invite email is deleted.

**Kerio Connector for BlackBerry**

- \* Improved capability to synchronize received ill-formed email messages.
- Email messages deleted on Blackberry don't get deleted from the INBOX on the server.

**Kerio Outlook Connector**

- Calendar event could be deleted from organizer's store when meeting reply was deleted.

**Kerio WebMail**

- Fixed viewing of a month/week view calendar on iOS device constantly increases in size.
- Fixed corrupted pdf files on Firefox for Mac.
- Fixed few translation issues.

**Kerio Connect client (a.k.a. New WebMail)**

- \* Graphical User Interface completely redesigned.
- \* Overlay calendars
- \* Smart sharing
- \* Improved performance.
- \* Improved style of paging toolbar.
- \* Redesigned Contact Groups.
- \* Contact suggestions in message editor.
- \* Respect calendar colors of CalDAV clients.
- + Calendar search implemented.
- + Added Calendar overview (user can choose 2-6 weeks).
- + Photos in contacts.
- + Added ability to vote on Suggest Idea.
- + Added support for custom From and Reply-To address.
- + Added ability to switch off sound in reminder.
- + Added Tasks.
- + Added Notes.
- + Added Contact Groups.
- + Advanced search implemented.
- + Added folder sharing.
- + Added header settings in mail composer.
- + Added ability to attach more files at once with drag & drop.
- + Added ability to show photo of mail sender.
- + Confirm reading, High priority flags implemented.
- + Message edit/preview in new window.
- + All messages in folder can be deleted/marked as read.
- + Message can be sent as attachment.
- + Remote images are shown in messages.
- + Added support for hotkeys.
- + Added support for rich text signature (without pictures).
- + Added support for archive and public folders.
- + Added ability to drag and drop a contact between folders.
- + Added settings of out of office, mail signature, language, time, and notifications.
- + Quota added to settings and navigation bar.
- + Added reminders popup on desktop with supported browsers.

- + Added mail filters.
- + Added support for password change.
- + Added contacts.
- + Added option to add attachments to forward.
- + Added ability to open a new mail composer window.
- + Added context menus on email messages.
- + Added out of office setting.
- + Added plain text signature setting.
- + Added ability to see sender's photo.
- + Added ability to mail to event attendees.
- + Added ability to invite all mail recipients at once.

**Known issues for Kerio Connect Client:**

- Tablets are not fully supported.
- Reminders will be shown for expired iCal events.

**Kerio Connect Administration**

- + Added version number to Sophos upgrade log information.
- + Added an option to show number of mailing list subscribers.
- + Added the possibility to choose the default WebMail client.
- + Added support for Internet Explorer 10.
- Fixed non-working copy&paste on Mountain Lion's Safari 6.
- Fixed missing options when deleting mailbox.

**Kerio Active Directory Extension**

- \* Users mapped from Active Directory use full name from Display Name Active Directory attribute.

**Kerio Open Directory Extension**

- \* Added X-Envelope-To header to all newly archived emails. The header contains all email recipients.

**Kerio Migration tools**

- + Added support for migration from MS Exchange 2010.
- 

**Version 7.4.3 - August 22, 2012****Kerio Connect**

- Reminders (ToDos) were not synchronized properly in Apple iCal.
- Completed tasks could be duplicated in Reminders app.
- Kerio Connect Account Assistant could configure MD5 authentication in Apple Mail accounts.
- Prematurely closed LDAPS connection could cause performance issue on server.
- Implemented workaround for missing HTML email body in messages synchronized to Sony Xperia S.
- Attachments were not extracted from certain TNEF messages.
- Microsoft Outlook 2011 could not use secondary user email address or domain alias in account setting.

**Kerio Connect Administration**

- \* Improved integration with Technical Support Portal.
- Fixed copy&paste shortcut in logs on Safari 6.

**Kerio Active Directory Extension**

No change.

**Kerio Open Directory Extension**

No change.

---

**Version 7.4.2 - July 11, 2012**

Please read the Release Notes document before installing this version.

**Kerio Connect**

- + Added support for OS X 10.8 Mountain Lion.
  - + Added watch dog script for Linux.
  - Fixed message numbering in the list of mailbox events sent in certain IMAP responses.
  - Microsoft Outlook 2011 for Mac could not see Public folders after configuration change from per-domain to global.
  - All-day event could be displayed as shifted in a week view in Microsoft Outlook 2011 for Mac.
  - Account assistant utility for Mac client could fail to run if the server is running in Virtual Appliance.
  - Fixed some stability issues.
- 

**Distributor Schweiz**

**Kerio WebMail**

- + Added support for Safari 6.0.
- Marking a message with a flag required the message to be selected first.

**Kerio Connect Administration**

- + Added support for Safari 6.0.
- In certain situation number of users in Web Administration could count also disabled user accounts.

**Kerio Outlook Connector**

- Event could be deleted from calendar after deleting email with meeting invitation.

**Kerio Outlook Connector (Offline Edition)**

- Microsoft Outlook could hang or terminate while using AVG 2012 SP1 add-in.
- Fixed a rare issue with non-working push of new messages to the client.

**Kerio Active Directory Extension**

No change.

**Kerio Open Directory Extension**

No change.

---

**Version 7.4.1 - May 29, 2012**

Please read the Release Notes document before installing this version.

**Kerio Connect**

- + Added support for Ubuntu 12.04 LTS.
- \* Auto-configuration tool for iOS devices configures also user password in the configuration profile.
- \* Email domain forwarding can use SMTP relay with authentication if the forwarding host is the same.
- Integrated anti-virus could use HTTP proxy for downloading updates even after it was disabled.
- Avserver process could produce a core file on server shutdown.
- Reply-To header was not used when sending a reply from Microsoft Outlook 2011 for Mac on some server installations.
